SCREENING

Biological Body Scan

Duration : 15 Minutes

Inclusion :

1. Biological Body Scan
2. 30 minutes Physician Consultation (to be scheduled after review of patient health questionnaire)

Biological Body Scan is a non-invasive screening device which identifies the current health status of a person in terms of heart rate variability (HRV) . This is a quick way to view the imbalances in the Autonomic Nervous System (ANS), Stress Level, Hormonal Regulation, Biological Age, and Psycho Emotional status of the brain.

The ANS controls your HRV. The ANS regulates your heart rate, blood pressure, digestion, and breathing and is divided into two main divisions: the sympathetic and the parasympathetic nervous system referred to as the fight-or-flight system and the relaxation response respectively.

It is well established that HRV is a measure of biological age. Biological age correlates with the body's ability to self-stabilize in response to stressors. Studies have shown that biological age is a better measure for determining health status and risk than chronological age even though age is one of the strongest factors that influence HRV values. Lower HRV value generally indicates an increased biological age (older). Higher HRV value is correlated with increased fitness, health, and youthfulness.

Biological Body Scan is a great preventive tool to motivate lifestyle changes.

Preparations :

1. No caffeinated drinks or food prior to the procedure.
2. No strenuous activities or sexual activities prior to the procedure.
3. Must have 8 hours of sleep prior to the procedure.
4. No metals, jewelry and electronic gadgets during the procedure.
5. No implanted pacemaker.

Biological Breast Scan

Duration : 30 Minutes

Inclusion :

1. Biological Breast Scan
2. 30 minutes Physician Consultation

Biological Breast Scan is an advanced non-radiation breast scanning device that is used for diagnosis and early detection of possible tumors or breast cancer by measuring the temperature changes in the breast tissues.

There is no ionizing radiation or trauma to the breasts involved unlike the traditional mammograms making it safe and an accurate alternative. It will determine hot focal spots in the breasts which may indicate some inflammatory reactions. When a cancerous growth develops, there may be excessive formation of blood vessels, and these will show up in the scan images, as well as areas with higher skin temperature.

Benefits include non-contact procedure that does not involve compressing the breast, no radiation exposure and may detect vascular changes in breast tissues that may indicate presence of breast cancer years before other screening tests can.

Preparations :

1. Should be done 8 to 10 days before and after the monthly period.
2. Do not wear brassiere or tight shirt 24 hours prior to the procedure.
Minimum of 12 hours.
3. Do not apply lotion or powder on the breast area.

Skin Health Scan

Duration : 15 Minutes

The health of your skin reflects your inner health. Depending on your individual skin health, previous and current lifestyle choices, and what type of skincare and programs you are on, skin age can change dramatically within a month. Aging skin can be a symptom of oxidative stress or too much free radical activities. It could also be due to excess sugar intake or the presence of toxicity. Skin health scanning can also determine your skin age.

This procedure uses a non-invasive device that assesses the wrinkles, pores, hyperpigmentation, moisture, skin type, and skin age. The results will be used as a guide to reverse premature aging of the skin.

Preparations :

1. Face must be clean.
2. No makeup.

INTEGRATIVE THERAPEUTIC TREATMENTS

Hyperbaric Oxygen Therapy

Duration : 60 Minutes

Hyperbaric Oxygen Therapy involves breathing pure oxygen in a pressurized chamber for 60 to 120 minutes. Due to the greater air pressure in the chamber, your body will be able to take in much more of the oxygen than it would be able to in normal circumstances.

Since HBOT increases the amount of oxygen it can increase circulation throughout the body, this can stimulate the release of growth factors and stem cells – and these can help accelerate healing and rejuvenation.

Benefits include: Increases blood flow, which in turn makes it easier for more oxygen to reach the brain, making this ideal for people who are suffering from head injuries. Aids in the formation of new collagen that helps to regenerate skin cells, connective tissues and blood vessels. Helps cells to regenerate faster in order to heal wounds or burns. Strengthens the immune system, improves function of WBC (White Blood Cells) in charge of fighting off viruses, infections, and illnesses that may attack your body.

Recent studies suggest HBOT is able to reverse two of the processes that are commonly associated with aging: shortening of telomeres and accumulation of old damaged cells. A study discovered a lengthening of up to 38% of the telomeres as well as a decrease of up to 37% in the presence of senescent (old) cells in patients using HBOT. This minimizes the increase of damaged cells and prolong the life span of cells.

Preparations :

1. May be done 1.5-2 hours after a heavy meal. 1 hour after a light meal.
2. No metals, jewelry, and electronic gadgets during the procedure.
3. Not advisable for patients with vertigo, asthma, colds or runny nose, and cough.
4. Patients who are hypertensive must take their maintenance prior to the procedure
5. Not advisable after Colon Hydrotherapy

Intravascular Laser Therapy

Duration : 30 Minutes

Low-Level Laser Therapy (LLLT) is a minimally-invasive method of treatment in which the body is exposed to laser light of low intensity. The therapy stimulates and regenerates cells and tissues and accelerates healing processes.

LLLT is ideal for individuals who are looking to improve chronic diseases (cardiovascular and diabetes), overall energy, cognitive function, sports performance, joint health, allergies, and detoxification. Patients with chronic conditions will experience significant, long-lasting relief usually with only a few treatments.

Benefits include: Improved blood flow and reduced blood pressure, improved quality of sleep and energy, metabolic optimization, strong immune system, tissue regeneration, reduced inflammation and decreased pain.

Preparations :

1. Patient must be well hydrated.

PRODUCTS

Alfacholine® Therapy

Alfacholine® Therapy is a patented solution formulated to bring out the best in you through the powerful benefits of the Phosphocholine Complex. Its synergistic effects work to boost heart, liver, and cardiovascular health, enhance cognitive abilities, and strengthen the cellular membrane. It is formulated with superior ingredients that support the overall health of your metabolism. We use this specific formulation to address serious cardiovascular events, which could potentially result in disability or death. It also plays a significant role in the metabolic function of the human body. A deficiency in it may speed up the development of non-alcoholic fatty liver disease, atherosclerosis, and potential neurological disorders.

Bluecell Extracts AF2

BLUECELL EXTRACTS AF2 a revolutionary anti-aging and moisturizing gel serum, enriched with Oxygenin™, Microalgae extract, botanical extracts, and probiotics. Here's how your skin will benefit: it nourishes and repairs by promoting cell renewal and boosting collagen production with essential nutrients and probiotics, helping to minimize wrinkles and revitalize your skin; it maintains skin hydration and delivers an instant lifting and firming effect, giving you youthful, healthy-looking skin; it brightens and clarifies as Oxygenin™ dissolves up to 49% of its volume in oxygen, supplying your skin with the oxygen it needs for brightness and clarity while supporting the skin healing process; and it provides an immediate perceivable tightening effect and long-term firming benefits with Microalgae Extract.

Caviar Marine 3R Serum

Caviar Marine 3R Serum, rich in amino acids, omega fatty acids, vitamins, minerals, Hyaluronan, and Malus domestica extract, promotes collagen production, provides maximum hydration, and offers anti-aging benefits, making it ideal for dry and aging skin by enhancing elasticity, diminishing fine wrinkles and pigmentation, and protecting against environmental pollution and makeup.

Placenta 3R DNA Spray

Placenta 3R DNA Spray, crafted with nanosized placental peptides, promoting accelerated healing, enhanced collagen and elasticity, wrinkle reduction, intense hydration, soothing inflammation, refined texture, and reinforced barrier protection.

Placenta 3R Serum

Placenta 3R Serum is a lightweight therapy serum containing bioactive and anti-inflammatory elements, reducing skin inflammation and aiding skin cell renewal for a natural beauty reveal. Enhanced with Hyaluronan and Malus domestica extract, it maximizes hydration and anti-aging benefits. Its advantages include accelerated skin healing, treatment of acneic skin, promotion of collagen production and elasticity, reduction of fine wrinkles, and increased skin hydration.

Hair Follicle Regenerator Spray

HFR Spray a lightweight, non-greasy hair serum infused with hair growth peptides and essential nutrients, effectively combating hair loss caused by stress, an unhealthy scalp, and nutritional deficiencies.

Hair Follicle Regenerator Extract

HFR Extract is dedicated to revolutionizing hair care by harnessing the power of Growth Factors to enhance hair follicle development and stimulate hair growth. Its benefits include boosting follicle development, promoting cell growth and wound healing, strengthening hair structure, and inducing tissue repair. For optimal results, pair HFR Extract with HFR Spray to experience synergy at its best, ensuring healthier, thicker, and fuller hair rejuvenation.
